

Regional Engagement Committee Meeting

December 12, 2024

Agenda

- » Updates and announcements
- » Scenario Development sub-team update
- » REC Engagement, Post Scenario Development
- » Timeline review/recap
- » Public comment

Updates Since 11/22 Public Webinar

- » Webinar reported solid progress and engagement on scenario development.
- » We continue to seek tribal engagement representatives, as well as utility interest from the desert and mountain regions.

Scenario Development: Sub-team Update

Focus of Scenario Planning Effort

- » The scenario planning sub-team has been tasked with facilitating the development of **two planning scenarios** in the 20-year horizon
 - » These futures represent alternatives to the "reference" scenario
 - » Scenarios should consider variations in things like technology advancement, load growth, policy changes, market dynamics, etc.
 - » Scenarios should reflect a comprehensive understanding of regional priorities, potential future developments, and capture various viewpoints
 - » Scenario results will be used to assess transmission needs across a range of plausible future outcomes

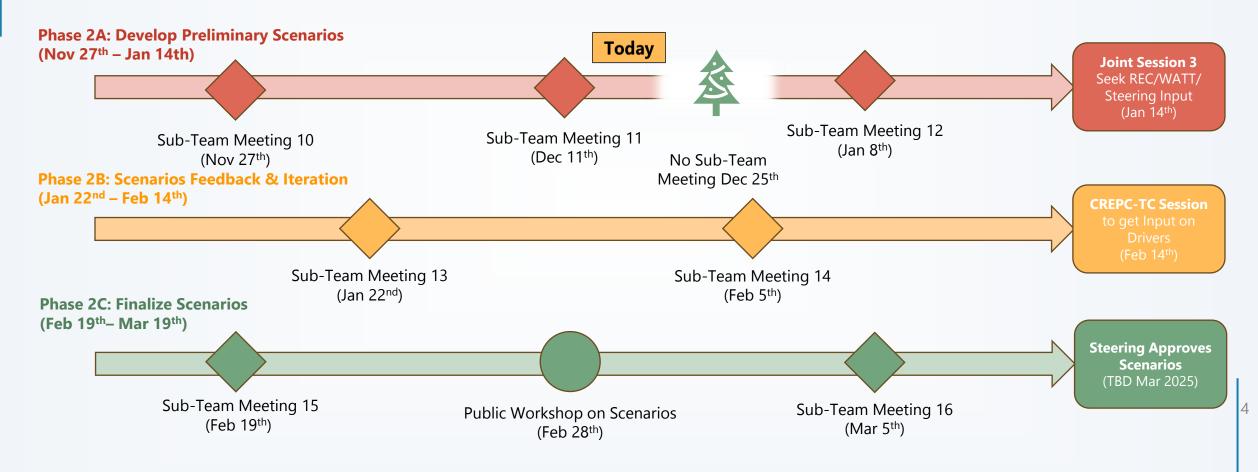

Scenario Planning Update

- » Sub-team has completed development of drivers
- » Sub-team is beginning the development of scenarios
 - » Sub-team members have each been asked to develop 2-3 scenario ideas over the holidays
 - » Brainstorming templates/aids were provided to the sub-team
 - » Sub-team will develop & refine scenarios through March 2025
 - » There will be more opportunities for input and feedback

Scenario Planning Roadmap

Scenario Brainstorming

» Scenario templates provided to sub-team on 12/9

» Sub-team ask: Please develop scenario narratives for 2-3 scenarios and upload them to the WestTEC Sharepoint (Scenario Templates (Completed) folder by Monday, January 6th

» Sources for scenario ideas:

- » Previous sub-team meeting materials
- » Survey results
- » CREPC-TC feedback questions
- » Concerns/interests from REC/WATT/public

Which factors do you believe are likely to have the most influence on load growth in the next 20 years?

Data center

Cryptocurrency

Demand response war followed by economic collapse

Carbon Policy

Climate change Economy Hydrogen New Technology

Data center growth

Regulatory policy Transportation electrification Organic

Vehicle electrification manufacturing AI policy

Politics 3443947

Natural Gas

Data centers heat pumps

Crypto mining

Population growth

Immigration

Govt Policy Electrification freight electrification

HVAC

Climate policy

Electrification of buildings Technology

Clean manufacturing

Extreme weather

Data centers and manufacturing

Which factors do you believe are likely to have the most influence on resources in the next 20 years?

Low cost renewables

The price for batteries and wind technologies

Local policies

climate policy carbon

breakdown

Lack of transmission Grid access

Storage capacity

technology Politics/policy

Siting

makers

Storage points

natural Transmission

resource adequacy

Permitting Federal policy

Politics busystate policy

Policy climate Public policy

Technological change

Supply chain

levelized cost Climate Goals Land use Technologies lobbyists Climate Goals advanced geothermal

Technology advancements

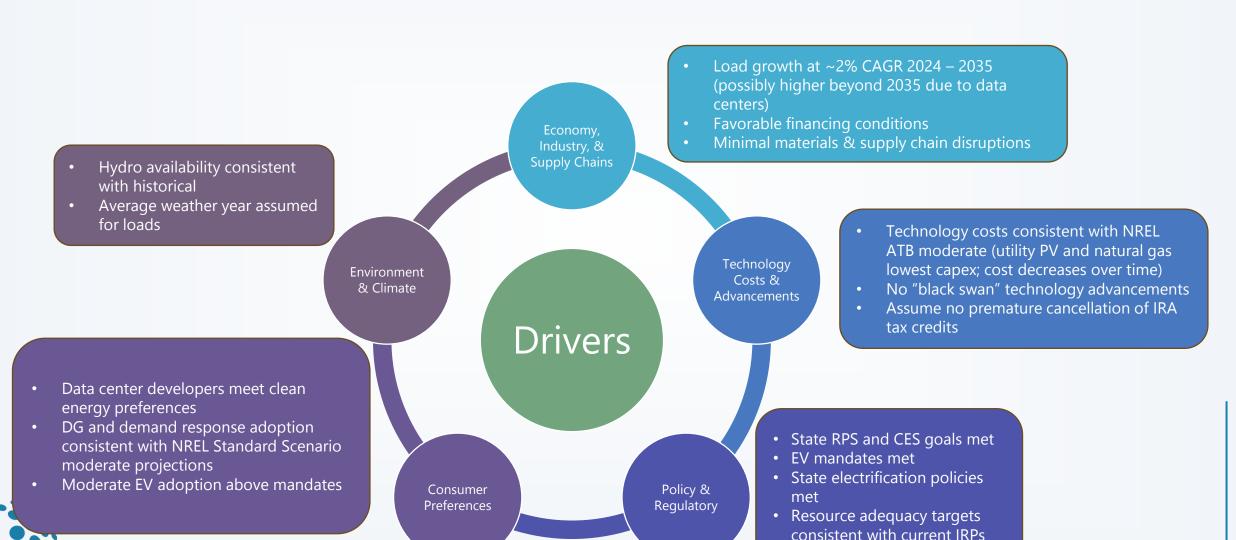

How would you rank the relative importance of each of these drivers?

0 2 9

1.	Regulatory & Policy	2.66
		3.66
2.	Economy, Industry, & Supply Chains	
		3.31
3.	Technology Costs & Advancements	
		3.03
4.	Climate & Environment	2.00
		2.90
5.	Consumer Preferences	
		1.28

Reference Case Scenario Narrative

Alternative Scenario Plots

Templates for Scenario Development

Scenario Overview: <Scenario 1>

Use this template to think through the most important points of your scenario. Include a short scenario name and photo that represents the essence of your scenario.

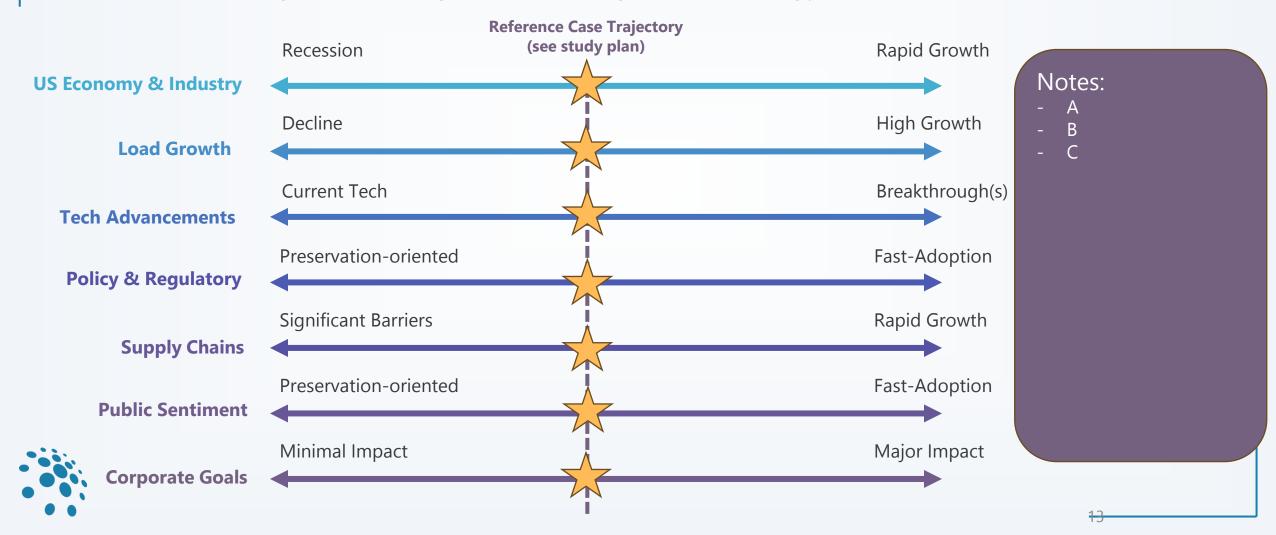

- » Scenario Name: < Scenario Name>
 - » Scenario Narrative Point 1
 - » Scenario Narrative Point 2
 - » Scenario Narrative Point 3

Insert an image that visually represents your scenario

Range of Outcomes: <Scenario 1>

Use this template to show ranges of outcomes, relative to the reference case, for scenario drivers specific to your scenario. Please change axis names or high/low labels and drag/drop stars accordingly.

Driver-Based Narrative: <Scenario 1>

Use this template to think through key narrative points for each of the WestTEC scenario drivers. (Bulleted points are just a suggestion).

Economy &

- <Industrial/data center load growth narrative>
- <Economy narrative>
- <Supply chain or materials narrative>

- <Narrative on hydro availability>
- <Narrative on temperatures>

Environment & Climate

Drivers

- Technology Costs & Advancements
- <Technology costs narrative>
- <Technology breakthrough narrative>
- <Other technology narrative>

- <Narrative on corporate preferences>
- <Narrative on DG/BTM adoption>
- <Narrative on demand-side tech adoption>
- <Narrative on EV adoption>

Consumer Preferences Policy & Regulatory

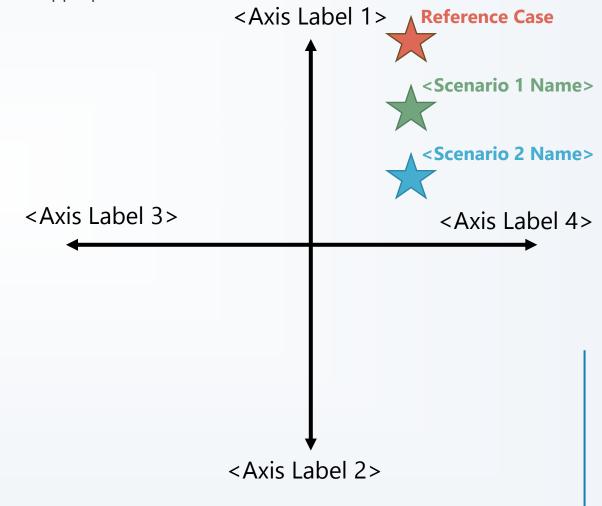

- Narrative on federal policies>
- Narrative on state policies>
- <Narrative on regulatory factors>

Multi-Scenario Framework

Use this template to think through all 3 scenarios. Think of what two axes best represent the key differences between the scenarios and drag and drop the stars where appropriate.

- » The two axes I chose to best represent my scenarios are...
 - » Comparing scenarios along these two axes is important because...
- » Together the three scenarios:
 - » Show a wide range of outcomes in X and Y
 - » Can be used to compare A and B
 - » I expect Scenario X to have the more transmission than the reference case because ...
 - » I expect Scenario Y to have less transmission than the reference case because ...

REC Engagement, Post Scenario Development

Ongoing engagement

» What on-going engagement does the REC committee believe is beneficial?

Initial 10-year Report Feedback

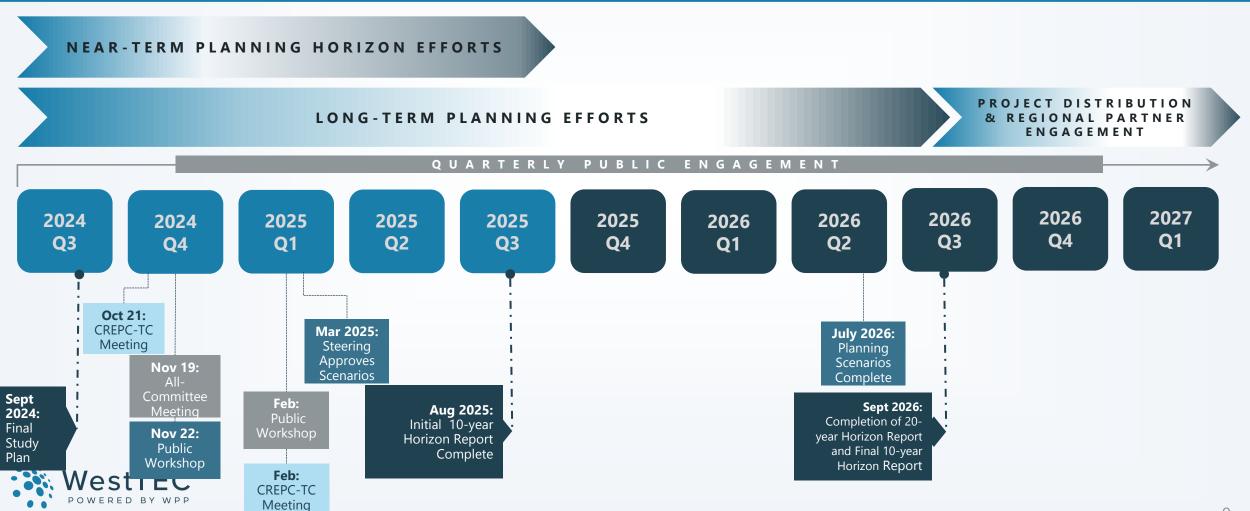

- » What type of feedback is expected on the report?
- » What is the mechanism for addressing feedback/coordinating between committees?

Overall WestTEC Project Timeline

WestTEC Project Timeline

Next Steps

- »In March, we expect approval of the planning scenarios and completion of the 20-year resource plan. The 10-year horizon transmission assessment and report should be completed in August 2025.
- » Please submit any comment on scenario feedback to GDS:
 - » gillian.biedler@gdsassociates.com
 - » rachel.risley@gdsassociates.com
 - » kyra.green@gdsassociates.com
